

## Brushing Skills Exercise - Painting trim

- Using an angled trim brush, coat the trim boards with a suitable paint working the trim boards in the long direction
- Work methodically and follow the wet edge to complete each trim board before moving on
- Orient the brush on edge for cutting a clean line and use the broad side of the brush for covering the larger faces of the trim
- The point of the angled trim brush always trails the stroke
- Control your brush, work up each edge, and do not rely on the masking materials to protect the field areas
